

ZOOMRide SQL Message To Manager

Dear Manager,

From the analysis, we started with 300 trips, but identified one duplicate ride, which was removed, leaving 299 valid trips.

We also found that 9 trips have missing fare values, while Lagos generated the highest revenue and Economy vehicles recorded the highest number of trips.

I recommend that the missing fares be investigated and verified from the original trip/payment records so the company's revenue figures are complete and accurate.

And, going forward, a data validation process should be implemented to ensure every completed trip has a corresponding fare before the records are finalized.

Thank you.

Uruchi Confidence Ihekweaba
